Luis Delgado Fernández

Java backend programmer and Spring Boot developer specialized in REST APIs and microservices.

Professional Summary

Backend engineer specialized in system design with Java 21 and Spring Boot. I design scalable microservice architectures, lead technical decisions, and enforce code quality, testing, and delivery practices in regulated environments.

Experience

Backend Developer

Amaris España Estrategia e Innovación Tecnológica SL (Remote - Madrid) | 08/19/2025 - Present

Development of Java 21 and Spring Boot microservices in a regulated environment, contributing to technical design and evolution of critical services.

- Designed and implemented Spring Security access-control policies, improving traceability for technical audits.
- Designed Kafka asynchronous flows to decouple critical services and improve end-to-end processing stability.
- Optimized SQL queries and JPA/Hibernate mappings to improve response times and data-access efficiency.
- Strengthened unit and integration testing in critical modules, reducing release regressions.
- Automated CI/CD pipelines with Docker and Azure DevOps to speed up and standardize deployments.
- Contributed to architecture decisions and code reviews, improving technical consistency and onboarding speed.

Creator and Development Lead

MisBarrancos | 07/01/2024 - Present

End-to-end product leadership (mobile app + web platform), deployed with Docker Compose, now with 1000+ users and brand interest for advertising.

- Defined product and technical direction from zero, turning an initial concept into an operational and monetizable platform.
- Built native mobile app with Jetpack Compose and web frontend with Vue 3 to deliver a consistent cross-channel experience.
- Implemented Java Spring Boot backend with MariaDB persistence, focused on performance and maintainable APIs.
- Automated data ingestion with Python scraping to enrich content and support organic growth.
- Managed deployment and operations on self-hosted Linux infrastructure using Docker Compose and continuous delivery cycles.
- Achieved market traction with 1000+ users and early commercial validation from multiple interested brands.

Backend Developer

KIO Networks (Murcia) | 01/15/2024 - 08/18/2025

Development of a portal for management and acquisition of data center resources.

- Designed and implemented hexagonal architecture, reducing coupling between domain and infrastructure layers.
- Developed Java and Spring Boot modules with clear contracts, improving maintainability and testability.
- Built reusable modular structure for resource management, accelerating delivery of new features.

Backend Programmer

Minsait (Zaragoza) | 11/21/2022 - 01/15/2024

Development of a portal for management and acquisition of data center resources.

- Applied hexagonal architecture to separate business rules from external integration points.
- Implemented Java Spring Boot services with strong domain clarity and long-term evolvability.
- Modularized the solution for scalability, reducing change impact across components.

Web Programmer

Izquierdo Informática S.L (Calatayud) | 07/05/2021 - 11/20/2022

Development of an internal solution for an insurance company focused on operational optimization.

- Built web applications with Java, JavaScript, and SQL to centralize key operations.
- Automated administrative processes, reducing repetitive manual work and management time.

- Improved access to internal data and services, increasing team operational efficiency.

Projects

MisBarrancos

Mobile application and web platform for canyoning exploration and management, deployed with Docker Compose, with 1000+ users and early commercial traction.

Stack: Java, Spring Boot, Vue 3, Jetpack Compose, Python, MariaDB, Docker

URL: https://misbarrancos.com

Base project for mountain instructors and clubs

Base web platform for mountain clubs and instructors, currently in development. Designed as a reusable and scalable core to manage activities, blog, regulations, and multi-club structure.

Stack: Java, Spring Boot, Vue 3, Mariadb, Docker

Technical Skills

Backend: Java 21, Spring Boot, Spring Security, Kafka

Architecture: Microservices, Hexagonal Architecture

DevOps: Docker, Docker Compose, Azure DevOps

Databases: MariaDB, SQL

Additional: Python, Vue 3, Linux, Scrum
